How Internet speeds work

The maximum Internet speed you select will be delivered to the Giga Hub or Home Hub, included with every Bell Internet service.

Connect multiple devices to the internet simultaneously, either through Wi-Fi or a wired connection. By selecting a higher speed, you ensure more of your devices can connect at faster speeds.

When connected to Wi-Fi, most devices today can reach speeds between 150 and 350 Mbps. The actual speed reached will depend on each device's capabilities, as well as the number of devices connected at the same time.

Wi-Fi speeds can also be impacted by other factors, such as the size of your home. Our Wi-Fi Pods can enhance your experience by providing coverage in every room.
